- III. Snow Removal Operations Index
 - a. Building by Building
 - b. Contractors
 - c. Parking Lot Information

Grounds and Waste Management Services Snow and Ice Removal Operations

This booklet is intended to be an operations manual for snow and ice removal on the Ann Arbor campus. Snow and ice removal operations are a complicated task and involve several University departments such as Parking and Transportation Services and Building Services, as well as outside contractors. Grounds and Waste Management Services (GWM) is the lead department and is responsible for producing this manual. It includes:

- Call in procedures and department operating hours
- Building index with identified tasks and responsibilities
- Contact lists

It is the goal of GWM to keep The University of Michigan campus open to traffic during any winter storm event. It is also GWM's goal to have the roads, docks, walkways, and ramps clear 24 hours following the end of any winter storm event. Parking Services (with assistance from Grounds) provides parking lot snow removal. This includes plowing and deicing. Building Services clears the entrances to the buildings out 14 feet (both snow removal and deicing) during their regular shift. Grounds is responsible for sidewalks, stairs and steps, public sidewalks and loading docks and lots (and entryways when Building Services is unavailable).

Our first priority is to do handicap accessible buildings and these are listed in the index in red.

GWM will follow best practices to accomplish these goals. These practices include the use of alternative snow and ice removal methods in order to minimize the damage to the University's infrastructure and the surrounding environment.

All of these operations are included in this manual. It is intended to be used as a guide and therefore subject to change. Any questions or comments should be directed to the GWM main office at 763-5539.

We also have a website that enables our customers to send via email their requests, concerns and complaints. The address is www.plant.bf.umich.edu/grounds/snow_removal.html.

ALTERNATIVE WINTER MAINTENANCE PRACTICES

Grounds and Waste Management

Proper materials application: The GWM calibration team continues to evaluate and calibrate all anti-icing/deicing materials and equipment. Proper calibration of all equipment is essential. This will always be a work in progress.

Operator training: It is essential that all equipment operators be well trained in applying materials appropriately with their assigned application equipment. It is expected that operators will apply appropriate quantities of anti-icing/deicing materials as per the Operations Matrix and or as conditions warrant. The acting "Snow Supervisor" has the final say on rates and materials during all snow events.

Materials: Alternative granular deicing products continue to be evaluated for effectiveness, non-corrosive properties, ease of application, and cost. Grounds personnel will use only those materials deemed least damaging to University facilities and the environment. GWM is currently using Magnesium chloride as its primary granular deicer for walks, steps, plazas, entryways, etc.

Application: Anti-icing products will be applied to paved surfaces when forecasts indicate there is a 50% probability of precipitation or other factors that may lead to slippery conditions for pedestrians and motorists. Research has shown that anti-icing practices improve the level of service and reduce total salt usage. Personnel will follow guidelines laid out in the "Operations Matrix".

Reduced salt use through expansion of liquid anti-icing/deicing materials and equipment: GWM has reduced its salt and sand use by an average of 43%. GWM currently has 17 liquid application units to cover all roads, parking lots, sidewalks, and entryways. Areas designated for anti-icing/deicing treatments will be sprayed with rates of application outlined in the "Operations Matrix". The principle liquid material is 23% Salt Brine mixed with Caliber M-1000 (30% concentration magnesium chloride brine blended with an engineered agricultural byproduct at a 90/10 ratio). This product has corrosion inhibiting properties and a very low effective melting temperature. We mix the two at a 90% Salt Brine/10% M-1000 ratio. The added M-1000 not only lowers the temperature at which you can apply it also acts as a sticker/spreader to hold it in place before the storm.

GWM currently has 3 salt spreaders in its fleet that have ground speed control equipment installed. Ground speed control and the associated in cab computer system enables the operator to make precise applications regardless of vehicle speed. Additionally, Grounds personnel can download actual material application data from each of these three vehicles in real time. These vehicles are equipped with RoadWatch pavement and ambient air temperature sensors. This information is useful to operators for understanding what is occurring at the pavement surface and how to best manage resources.

GWM currently has a 925 gallon liquid application unit that is designed to apply liquids on roads and parking lots for anti-icing and de-icing. This unit is capable of working up to 45 mph covering one, two or three drive lanes. The rates are computer controlled correlated to ground speed from inside the cab. We use this unit for direct road and parking lot applications of very light snow amounts.

GWM will continue to use our brine maker to manufacture 23.3% brine derived from standard, untreated road salt. This material will be applied alone when conditions warrant it and will be blended in various ratios with the Caliber M-1000 when colder effective temperature ranges are necessary. The inclusion of the sodium chloride brine in the product mix will reduce costs and enable more wide spread application. Application rates have been set at 20-40 gallons per lane mile (12' x 5280' or 1.454 acres) in the anti-icing mode and 40-100 gallons per lane mile in the de-icing mode.

Treated road salt: GWM will continue the practice of using treated road salt. This practice improves the level of service while cutting total salt use. Treated salt is rock salt that has a magnesium chloride based solution applied at a rate of approximately 8 to 10 gallons per ton. Treated salt has faster melting properties, reduces the temperature at which salt is effective, and minimizes bounce and scatter on the road surface resulting in less salt loss to inappropriate areas. GWM is currently using treated salt as its primary material.

Closure of non-essential facilities ingress/egress: Campus facilities continue to be evaluated for the potential to close certain areas of campus for maintenance purposes. Provided that customer convenience is not compromised, closure of non-essential areas reduces maintenance costs, speeds up reaction time, reduces potential exposure to liability, and reduces the use of chemical deicers.

Additional ongoing programs: This includes enclosing walk and ramps from the elements, the potential for heating paved surfaces, paving surface materials and how they impact snow removal operations or are impacted by them, paved surface area obstacles which hinder snow clearance and result in equipment damage and down time, automatic liquid deicing dispensing systems for high value/high use infrastructure and exploration of a winter emergency ordinance for the winter months.

Operations Matrix for Winter Maintenance of Roads

University of Michigan Grounds and Waste Management Services

Ground Temperature	Dusting of Snow with no snow forecasted	Less than 1" of Snow Accumulation with no Snow forecasted	Less than 1" of Snow Accumulation with light snow falling	More than 1" of Snow Accumulation with heavy snow falling
Above 25 degrees F.	Apply 40 gal/lm of Salt Brine or apply 100 lbs/lm of road salt.	Plow and Apply 60 gal/lm of Salt Brine or apply 200 lbs/lm of road salt.	Plow and Apply 300 lbs/lm of road salt.	Plow and Apply 300 lbs/lm to hills and intersections.
18 - 25 degrees F.	Apply 50 gal/lm of Salt Brine with M1000 mix or apply 150 lbs/lm of road salt.	Plow and Apply 75 gal/lm of Salt Brine with M1000 mix or apply 300 lbs/lm of road salt.	Plow and Apply 400 lbs/lm of road salt.	Plow and Apply 400 lbs/lm to hills and intersections.
10 - 18 degrees F.	Apply 300 lbs/lm of road salt.	Plow and Apply 400 lbs/lm of road salt.	Plow and Apply 500 lbs/lm of road salt.	Plow and Apply 500 lbs/lm to hills and intersections.
Below 10 degrees F.	Spot treat hills and intersections with 500 lbs/lm of road salt.	Plow and Spot treat hills and intersections with 600 lbs/lm of road salt.	Plow and Spot treat hills and intersections with 800 lbs/lm of road salt.	Plow as necessary. Spot treat hills and intersections with 900 lbs/lm of road salt.

These Rates are based on using treated salt.

Use Belly Plow when snow accumulations reach 1/2" or more. Plow as often as possible.

Always consult acting snow supervisor for rates when ground temperature is below 10 degrees F.

Chlorinated sand is only used if severe conditions exist and must be approved by the acting snow supervisor.

If freezing rain or ice is accumulating consult acting snow supervisor for materials use and rates.

When Salting: Gates on Trucks should be at 2 inches.

g/lm - gallons per lane mile (12' x 5280')

lbs/lm - pounds per lane mile (12' x 5280')

After Hours Notification Procedures for Snow & Ice Removal Services

Revised 11/20/08

When to Call:

Plant Operations Call Center (POCC) should contact the Grounds Department and Parking and Transportation Services under any of the following weather conditions:

1. **Streets and walks** become hazardous to vehicle and pedestrian traffic due to the accumulation of snow, ice or sleet.
2. Notification from the **Ann Arbor Police and Fire Department** of a hazardous traffic area.
3. Notification from the **University Hospital Security** of a hazardous pedestrian or vehicle area
4. A call from a University bus driver of **hazardous road conditions**. Public Safety's road patrol should verify all bus driver calls.
5. A call from a University customer or visitor of hazardous **parking structure or parking** lot conditions. Contact Parking Services- Dan Smith 734-260-6598. **Exception**, call Grounds Services for Medical/Hospital campus parking lots and Housing Parking Lots on North Campus.

Protocol

1. The snow call comes into POCC from the customer. POCC should get the following information on each call:
 - Contact name
 - Location
 - Description of situation (steps, sidewalk, north side of building, snow, ice, etc.)
 - Phone number customer can be reached at for further information
2. Building Services cleans entry ways in buildings they service during their *regular shift*. The times vary. Please refer to the list provided for this information. Call the appropriate Building Services area manager for entryway cleaning during these times.
3. POCC calls the Grounds After-Hours Crew:
 - Monday-Friday 3:30 p.m.- 11:00 p.m. contact Brad Naebeck on 6B (Responsible for entire campus)
 - Monday-Friday 9:00 p.m.- 5:00 a.m. contact Fred Voss on 6B (Responsible for entire campus)
4. On Weekends, POCC should call the snow pager 734-817-2402.
5. If it is a parking lot, Parking Services should be contacted. If no one answers, please call Public Safety.
 - Monday- Friday 5:00 a.m.- 1:30 p.m. Fred Palm 734-260-4789
 - Monday-Friday 4:00 p.m.- 12:30 a.m. Dan Smith 734-260-6598
 - All Days 1:00 a.m. – 5:00 a.m. Scott Harrington 734-260-7193
6. POCC should call the Grounds Snow Pager between the hours of 5:00 a.m.- 6:00 a.m. Monday through Friday.

Calling Procedures

1. Contact person on the radio. Try at least three times over the course of ten minutes, as they may be out of the truck loading salt.

2. If there is no response to the radio, call the person who is on shift via their Nextel and leave a message. Please allow ten minutes for call back before moving on to the snow pager.
3. If there is no response to the Nextel, call the snow pager at 817-2402. If there is no response after ten minutes, call the supervisor's cell phone.

Helpful Hints

We do not pull vehicles out of snow banks

We do not jump start vehicles

Snow removal is only done on regular sidewalks and streets, not cowpaths

Parking Services is responsible for the tops of the parking structures

Parking Services is responsible for anything leading up to the Parking Structure (i.e. drive entrances)

Department Operating Hours

Grounds Department
